

CUSTOMER INTELLIGENCE PROTOTYPE

Find the friction. Prioritize the fix.

An AI-assisted workflow that turns scattered feedback into validated themes, transparent scores and a decision-ready product backlog.

impact

Prototype an inline confirmation that previews downstream schedule changes before a route edit is saved.

DECISION-READY OUTPUT

Recommended product backlog

Ranked using normalized volume, severity, customer impact and implementation confidence.

RANK	CUSTOMER PROBLEM	VOLUME	SEVERITY	IMPACT	SCORE	RECOMMENDED NEXT ACTION
1	Route editing clarity RT - synthetic theme	292	4.6/5	92	87	Preview downstream schedule changes before a route edit is saved.
2	Mobile sync reliability MS - synthetic theme	246	4.8/5	96	85	Expose failed sync states and test an offline retry queue with field users.
3	Permissions ambiguity PA - synthetic theme	181	4.2/5	84	73	Show exactly which locations, assets and actions each role can access.
4	Alert noise AN - synthetic theme	218	3.7/5	73	72	Test role-based alert bundles and a digest for repeated low-urgency events.
5	Setup handoffs ON - synthetic theme	144	3.9/5	76	65	Create an owner-based launch checklist with dependencies and status.
6	Report exports RE - synthetic theme	167	3.2/5	64	63	Add saved export presets that preserve selected filters.

SCORING MODEL

Score = 30% volume + 30% severity + 25% customer impact + 15% implementation confidence

HUMAN IN THE LOOP

From messy feedback to trusted decisions

The model organizes evidence. Human review protects judgment, context and accountability.

01

Normalize

Standardize source fields, remove duplicates and flag missing information.

02

Classify

Apply a six-theme taxonomy with confidence scores and traceable labels.

03

Validate

Review every low-confidence classification and all severity-5 records.

04

Prioritize

Score opportunities transparently, then confirm them through discovery.

QUALITY CONTROLS

Classification agreement **91.8%**

Low-confidence review **100%**

Required-field completeness **98.6%**

Duplicate resolution **47 records**

WHY I BUILT THIS

This project demonstrates how I approach an ambiguous operations problem: start with the user, structure the evidence, test assumptions and create an output people can act on.

TRANSFERABLE EXPERIENCE

- High-volume workflow and customer issue analysis
- Epic, Excel and operational data accuracy
- AI-assisted research with manual validation
- Clear recommendations for nontechnical partners
